Stay Safe Online

When you arrive at FP2 we'll start by learning how to use our school computer systems and then we'll talk about staying safe online. You can get a head-start by going through this short workbook before you arrive in class.

You can work through these activities in any order you like and if you know about different sites online that explain things well, use those to help you too!

Task 1

What do you think are some of the things that might be dangers online? *Write your answers in the box below*

<ul style="list-style-type: none">•••

Bullying

Unfortunately, bullying is something that exists in every school - and outside of school too. It doesn't always start with someone deliberately being mean, it can start as a joke and get out of hand.

Click the link below and watch the bottom video "Stop Speak Support"

Beat the cyberbullies

Stop, Speak, Support is a campaign from The Royal Foundation which aims to help young people spot cyberbullying and know what steps they can take to stop it happening.

Task 2

Secondary school students often need a reminder of what to do if they experience bullying or see it happening to someone else.

One way to do this is to create a poster - make it a whole A4 page, use colour and think about helpful advice to give, perhaps based on Stop Speak Support.

If you have an idea of a different way of sharing your advice (perhaps a video or something else) then make that instead!

Malware

Maybe this is a new word to you? It's short for "malicious software" which means that it's dangerous and intended to damage your computer or worse.

We can't trust all the apps out there, all the adverts that display on our devices, all the links we are sent. Some websites, apps or emails are designed to trick you into downloading and installing malware.

Some of them are intended to spread themselves (**viruses**). A virus may damage files and delete data or it may take your personal data (even photos and videos) and publish them online.

Other malware might track what you do and type on your device - even passwords and credit card details - this is called **spyware**. There are other types of malware too such as **trojans** and **zombies**.

Task 3

Imagine an older relative has just got a new computer or mobile. They need some advice on keeping it safe from malware. Write an email message to them about what the risks are and how to stay safe.

Rather than writing an email, you could record a video message for them, explaining in your own words how to stay safe from malware.

Task 4

Here are some keywords that we've used in this topic. Can you explain what each one means **in your own words**?

Keyword	My explanation
Bullying	
Cyberbullying	
Support	
Personal data	
Malware	
Virus	
Spyware	
Antivirus	
Common sense
